

A METHOD FOR HAND-OFF OF A DATA SESSION

ABSTRACT OF THE DISCLOSURE

- A method for hand-off of a data session in a server. Data is received
- 5 from a data source. At least a portion of the data is transmitted to an electronic device located in a first location. Notification is received that the electronic device is moving toward a second location. A first message is transmitted to a second server notifying the second server that the electronic device is moving toward the second location, wherein the second server is
- 10 located proximate to the second location. A second message is received from the second server that the second server is prepared to communicate with the electronic device. The server then stops transmission of the data.
